Reasoning About Uncertainty

Joseph Y. Halpern

"Halpern presents a masterful, complete and unified account of the many ways in which the connections between logic, probability theory and commonsensical linguistic terms can be formalized. Terms such as 'true,' 'certain,' 'plausible,' 'possible,' 'believed,' 'known,' 'default,' 'relevant,' 'independent,' and 'preferred' are given rigorous semantical and syntactical analyses, and their interrelationships explicated and exemplified. An authoritative panoramic reference for philosophers, cognitive scientists and artificial intelligence researchers." — Judea Pearl, Computer Science Department, University of California, Los Angeles
 456 pp., 12 illus. \$50

Reasoning About Knowledge

Ronald Fagin, Joseph Y. Halpern,
 Yoram Moses, and Moshe Y. Vardi

"It is easy to foresee that this book will become a classic." — Fabrizio Sebastiani,
The Computer Journal
 491 pp., 13 illus. \$39.95 paper

New from The MIT Press

What Is Thought?

Eric B. Baum

"Presents a novel thesis—that the mind is a program whose components are semantically meaningful modules—and explores it with a rich array of evidence drawn from a variety of fields. Baum's argument depends on much of the intellectual core of computer science, and as a result the book can also serve as a short course in computer science for non-specialists."
 — David Waltz, Columbia University
 A Bradford Book • 495 pp., 34 illus. \$37

Department of Health and Human Services Medical Informatics Fellowships	
<p>Lister Hill Center</p> <p>National Library Of Medicine</p> <p>National Institutes Of Health</p>  <p>HHS and NIH are Equal Opportunity Employers</p>	<p>The Lister Hill National Center for Biomedical Communications at the National Library of Medicine, a research component of the National Institutes of Health (NIH) and the Department of Health and Human Services, is recruiting for postdoctoral fellows, graduate and medical students and visiting scholars to participate in collaborative research in a variety of areas of biomedical informatics.</p> <p>Lister Hill Center research activities fall into several broad categories. Our language and knowledge processing research involves basic research in medical language processing and medical knowledge representation, and image processing research involves the development of algorithms and methods to effectively process biomedical images of all types. We have developed and continue to support a number of information systems, all of which are informed by our basic research activities. In addition, Lister Hill Center staff are involved in a number of activities that define and support the research infrastructure for next generation information systems.</p> <p>Postdoctoral candidates should have a PhD., M.D. or equivalent degree in medical informatics, computer science or engineering and have research experience in informatics. Stipends are commensurate with research experience and education. For additional information and instructions on submitting your application, see our website, at: http://lhncbc.nlm.nih.gov.</p>
